

#### **ABSTRACT OF THE DISCLOSURE**

The present invention provides an Internet-based construction bid management system that can be accessed and utilized by construction project owners, general contractors, subcontractors, vendors, and other parties interested in the construction bidding process. The system accommodates the posting of projects, the submission of bids, the distribution of construction drawings, and the collection of historical bid results, via any number of networked computer devices. The automated nature of the system ensures that the current bid status of any number of projects can be quickly updated for immediate access by the various participants
